The Choice of Professionals

Technical DATA

Professional-Grade Aftermarket BATTERY CABLES

Precisely Engineered to Meet or Exceed Demanding OE/OES Performance

ProConnect battery cables are made by Prestolite Wire, the original supplier of ignition wire sets and battery cables for many North American car and truck manufacturers. These professional-grade battery cables perform like the original and are made to meet or exceed OE/OES specifications. ProConnect battery cables are quality constructed and are designed to fit and perform like the original part.

OE/OES Fit, Quality, Performance, Length and Gauge

ProConnect battery cables meet or exceed OE/OES specifications, performance and quality for both domestic and import vehicles. These cables match the original design, are pre-cut to exact lengths, exact gauge, and use OE/OES style connectors and boot caps. All ProConnect products undergo strict quality control, testing procedures and have a limited lifetime warranty.

Patented Prestel™ Jacket Performs Better than the Original

ProConnect battery cables are constructed using the patented Prestel™ insulation that withstands higher temperatures than

standard PVC for a longer lasting life. The unique construction enables ProConnect battery cables to provide more current carrying capacity and flexibility than standard battery cables.

Engineered Precisely for Quick Installation

ProConnect battery cables fit like the original. Battery terminals are designed to meet OE/OES specifications and all lugs and ring terminals are tin-plated to reduce corrosion. Terminal caps and covers are designed to provide added strength and durability. Cables use a higher copper strand count (circular mill area) for flexible routing and installation. Cable and trailing leads match OE/OES length and use OE-style midpoint mounting connections, when specified, to eliminate the need for cutting, stripping or additional cables.

Complete Vehicle Coverage

ProConnect battery cables are available to match virtually all domestic and import vehicle makes and models manufactured over the last 25 years. ProConnect battery cables are also available for marine applications.

Technical DATA

Professional-Grade Aftermarket BATTERY CABLES

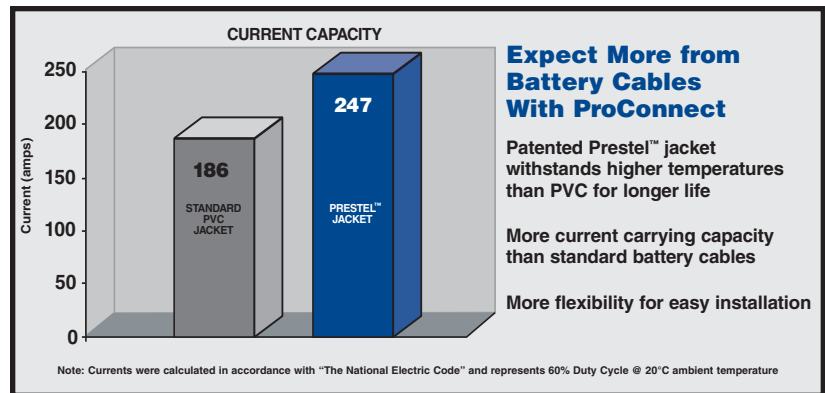

PERFORMANCE

- n Meets or exceeds OE/OES specifications
- n Original fit, function, performance and color
- n OE/OES specified trailing leads length and positioning
- n Midpoint mounting connections, when specified, ensure proper mounting and fit
- n Minimum 150 pounds of cable pull strength
- n OE/OES specified terminals for maximum starting power
- n More copper strands for greater flexibility and more starting power under extreme temperatures

FEATURES

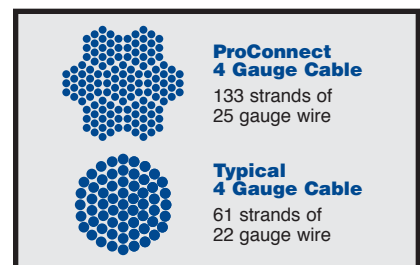

- n Prestel™ jacket exceeds OE performance
- n OE/OES gauge wire
- n Terminals designed to match the original
- n Trailing leads exactly match OE/OES lengths
- n Tin-plated lugs and ring terminals resist corrosion
- n OE-style midpoint mounting connections
- n Protective terminal caps and cable looms when specified on the OE cable
- n Higher copper strand count (circular mill area)

PRESTEL™ JACKET PERFORMANCE CHARACTERISTICS

ProConnect Battery Cables have a Greater Circular Mill Area than Other Cables

- n More strands provide greater flexibility for easier installation and routing
- n Lower resistance for more power and energy
- n More efficient
- n Greater starting power
